CHIPCO® GREEN is a contact fungicide containing iprodione which has curative control. Bayer recommends responsible product stewardship to ensure effective long term control of the target disease, as well as non chemical methods of resistance management:

- In case of resistance, switch to a fungicide from a different chemical group that are effective against the target disease, as well as non chemical practices.
- For the same fungal disease, avoid using the fungicide on the same turf area if possible.

CHIPCO® GREEN is rainfast within 1 hour and can prevent the build-up of morning dew on grass leaves. Therefore it is usually unnecessary to 'switch' to remove this dew. However, switching may be necessary if strong winds and high temperatures are expected unless dew forms early in the morning.

CHIPCO® GREEN can be applied year round to golf courses. Curative: Apply at the first sign of disease and repeat as necessary at intervals of 1 month or greater.

TIMING OF APPLICATION: Add the appropriate quantity of CHIPCO® GREEN to the spray tank, which contains half the required volume of a spray base.

APPLICATOR NOZZLE TYPES:

- Spot Foggers
- Spot Sprayers
- Hydraulic Sprayer
- Fogger Sprayer

CHIPCO® GREEN is a suspension concentrate containing 255 g/Litre (25%w/w) iprodione.

CHIPCO® is a registered trademark of Bayer Environmental Science.

CHIPCO® GREEN is effective against the following fungal diseases on this label.

- Anthracnose (Colletotrichum graminicola)
- Rust
- Red Thread (Microdochium nivale)
- Dollar spot
- Leaf spot
- Red Thread

Application Rate: 250 L/ha for preventative and curative control. Reduce the quantity applied according to the size of application area.

RECOMMENDATIONS: For use on:

- Prohibited: clubs, grounds in which cows are kept or kept in proximity
- Professional sports pitches (except golf courses)

CHIPCO® GREEN can be applied year round to managed amenity turf. Its special liquid formulation is 'rainfast' within 1 hour and can prevent the build-up of morning dew on grass leaves. 'Switching' to remove this dew is therefore usually unnecessary.

CHIPCO® GREEN belongs to the dicarboxamide class of chemistry. There has been no record of managed amenity turf pathogens developing resistance to CHIPCO® GREEN.

Resistant pathogen populations may develop to any fungicide if there is no variation in the treatment programme. To avoid the development of resistance, a resistance management strategy should be adopted. This strategy should include using in rotation and/or tank mixture with products that have a different mode of action or spectrum. The resistance management strategy for CHIPCO® GREEN should include:

1. Using the product in rotation and/or tank mixture with other fungicides that have a different mode of action or spectrum.
2. Using the product at the lowest effective dose.
3. Using the product for the shortest time possible.
4. Avoiding overlapping spray programmes.

Resistance Management:

For control of Red Thread, Fusarium Patch and Dollar spot. Useful reduction of Anthracnose, Rust and Leaf spot when present at time of application.*

APPLICATION RATE:

TIMING OF APPLICATION:

- PREVENTATIVE: Apply at monthly intervals.
- CURATIVE: Apply at the first sign of disease and repeat as necessary at intervals of 1 month or greater.
- *Useful reduction for when present at time of application against the other listed diseases.

RESIDUES:

CHIPCO® GREEN is unlikely to give rise to residues on the crop. CHIPCO® GREEN should be applied after acting and better results may not be seen for 28 days. Food handling practices are not required.

CHIPCO® GREEN may be used up to 3 days before harvest.

CHIPCO® GREEN contains 1,2-benzisothiazolin-3-one. May produce an allergic reaction. Clean containers which can be disposed of as non-hazardous waste.

SAFETY PRECAUTIONS

- Read the label before use. Using this product in a manner that is inconsistent with the label may be an offence. Follow the code of practice for using plant protection products.
- Do not renewable equipment near water sources. Do not allow direct spray from horizontal boom sprayers to fall within 5 m of the top of the bank of a static or flowing water body, unless a Local Authority permits a narrower buffer zone, or within 1 m of the top of a ditch which is dry at the time of application. Do not contaminate water with the product or its container. Do not clean application equipment near surface water. Avoid contamination via drains from farmyards and roads.

SAFETY PRECAUTIONS

- Wash out all spray equipment thoroughly with water immediately after use. Spray immediately after mixing.
- Continue agitation at all times during spraying and stoppages until the tank is completely empty.
- Take off immediately heavily contaminated clothing.
- Wash out container thoroughly and dispose of safely.
- Keep away from food, drink and animal feeding stuffs.
